240 Volt Board Glacier, TMX, TMDZ, XTM, Supakool,

We have had some inquiry's regarding 240Volt boards in the above-mentioned models, there has been 2 versions used in these models and there has been a bit of confusion regarding the wiring and change over.

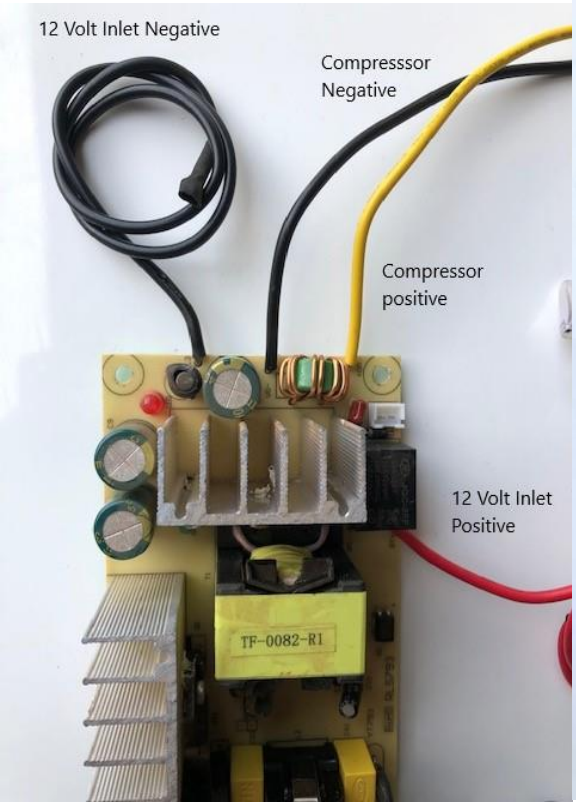

We are only carrying Version 1 boards and the retro fit from a version 2 to a version 1 is a simple one, there are only 4 wires to be re-soldered. See attached photos showing the wire placement on both boards circled in RED.

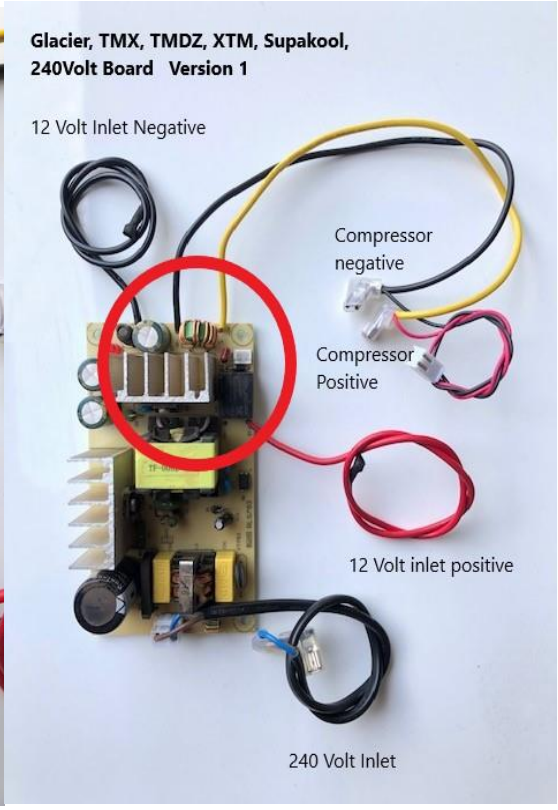

NB. When changing from a version 2 board to a version 1 board you will need the plastic cradle as well, as they are different sizes.

Jaimie Yates

Head of Refrigeration Evakool
